## Angas-Sura Etymologies VIII

### Introduction

The languages of the Angas-Sura (AS) group are spoken between the South-Eastern Plateau and the Benue river, Plateau State of Nigeria, by about 200.000 people in the estimation of H. Jungraithmayr (1981, 407). The Angas-Sura language group belongs to the West Chadic subbranch (cf. e.g. Jng. 1981, 407-8; Stl. 1987, 31; JI 1994 II, viii) of the Chadic branch, which, in turn, represents part of the great Afro-Asiatic (Semitic-Hamitic) language family (or phylum), which is divided into six equipotential cognate branches: Semitic, Egyptian, Berber, Cushitic, Omotic, Chadic.

The best inner classification of the Angas-Sura group was suggested by C. Hoffmann (1971; 1975 MS, 2), who assumed Gerka to have been the first member split off from the group. The remaining group falls into three subgroups: (1) **Northern**: Angas, (2) **North-Eastern**: Sura, Mupun, Chakfem-Mushere Chip, Jorto, Kofyar, (3) **Southern**: Kanam (Koenoem), Pyapun(g), Tal, Montol, Goemai. On the basis of my own research on comparative AS phonology, I can state that the phonological isoglosses confirm the correctness of Hoffmann’s inner classification. Henceforth, I use the following (slightly modified) inner grouping: (1) **Gerka**, (2) **Angas**, (3) **Suroid** languages (falling further on in two clusters: 3.1. Sura-Mupun vs. 3.2. Kofyar-Mushere-Chip according to the isoglosses of the complex AS \*g<sup>y</sup>-), (4) **Goemaioid** languages (Kanam/Koenoem, Pyapun/Pyapung, Tal, Montol, Goemai).

The inner reconstruction of the Angas-Sura language group had only been elaborated in minor segments<sup>1</sup> until the first comparative lexicon of the Angas-Sura group has been completed (Takács 2004)<sup>2</sup>. Now, it has become plausible to systematically deal also with the external cognates of the Angas-Sura lexical stock. The series „Angas-Sura Etymologies”<sup>3</sup> is contributing to outlining the so far unknown background of Angas-Sura lexical stock primarily with new lexical parallels. In this issue of my series, the new external (Afro-Asiatic) correspondences of some of the Angas-Sura (AS) roots with initial \*d- are discussed, collected mostly during my 2019 research on the Afro-Asiatic root stock with initial dentals in my Ederics library.

## Some peculiar elements of the Afro-Asiatic background of the Angas-Sura historical consonantism

- A general devoicing of the voiced PAA stops in the Auslaut of the AS stems is a recent development. There are but a handful of records of older final \*-b#, \*-d#, and hardly any for \*-g# (cf. Takács 2004, xxv-xxvi, xxxi, resp.).

<sup>1</sup> Thus, G. Greenberg (1958) surveyed the Angas-Sura roots beginning with labials pointing out the original labial triad \*b - \*p - \*f inherited from Afro-Asiatic. O. V. Stolbova devoted two studies to the subject, using basically the Angas (Foulkes 1915, Ormsby 1913-4) and Sura (Jungraithmayr 1963) lexicons for the comparison adducing some additional data from Chip, Montol, Gerka (collected and published by Jungraithmayr 1965). In 1972, she proposed a historical-comparative survey of the Proto-Angas-Sura consonant system in the light of some illustrative lexical material (2-3 exx. for each correspondence). In her 1977 paper, Stolbova presented 256 lexical roots and Proto-Angas-Sura reconstructions accompanied by a brief sketch of vowel correspondences. C. Hoffmann (1975 MS) offered a phonological (both consonantal and vowel) reconstruction of the Proto-Angas-Goemai level (on the basis of Goemai, Mernyang, Sura, and Angas) through 248 lexical roots. The West Chadic historical phonology by Stolbova (1987, 240-244) also contains a separate list of some 64 Proto-Angas roots.

<sup>2</sup> I express my cordial thanks for the constant and many-sided unselfish support yielded for my work by the great Chadicist, Prof. Herrmann Jungraithmayr (Institut für Afrikanische Sprachwissenschaften, J.W.Goethe-Universität, Frankfurt a/M). I am greatly indebted also to the Alexander von Humboldt-Stiftung (Bonn) for facilitating my research stays at Frankfurt a/M (1999-2000, 2002) as well as for funding the publication costs of the Angas-Sura comparative lexicon together with the OTKA (Hungarian National Scientific Research Fund, project nr. D 45976). I express my deep gratitude to the City Hall of Székesfehérvár (Hungary) for its „Lánzós-Szekfű” prize granted almost twenty years ago for an early phase of my research on the Afro-Asiatic background of the Angas-Sura lexicon, which I eventually began back in Sept. 1998 during my research at the Haifa University (funded by the OSI at Prague, which is gratefully acknowledged also in this place) with the guidance of the late Prof. A. B. Dolgopol'sky (1930-2012), one of the greatest Afro-Asiatic or Semito-Hamitic comparativists of all times, may his memory be blessed.

<sup>3</sup> The first part (AS roots with initial \*b-) appeared in *Lingua Posnaniensis* 46 (2004), while the second one (AS roots with \*b-) in *Rocznik Orientalistyczny* (Warsaw) 57/1 (2004), and the third issue (AS \*p-) in *Lingua Posnaniensis* 48 (2006). The fourth part (AS \*f-) has been published in *Folia Orientalia* (Kraków) 47/2 (2011), while the fifth part (AS \*m- in monoconsonantal roots) in the *Cahiers Caribéens d'Egyptologie* (Schoelcher, Martinique) 13-14 (2010). The sixth part (the rest of AS etymons with \*m-) is forthcoming to appear *Rocznik Orientalistyczny* (Warszawa) 74/1 (2021), while the seventh one in *Lingua Posnaniensis* (Poznań) 62/3 (2020).

Sometimes the devoicing of plosives may be observed even in other positions too under conditions that cannot be precisely known as yet.

- Labials basically reflect the original AA triad of \*b, \*p, \*f as demonstrated by J.H. Greenberg (1958) and manifold corroborated by V.M. Illič-Svityč (1966, 9, 14-15), O. V. Stolbova (e.g., 1996, 15, §I.1.), and G. Takács (2001, 55; 2011, 148-152 etc.).
- AS \*-V $\gamma$ V- < either an AA root medial „laryngeal” or a velar or a semi-vowel, i.e., where the -C<sub>2</sub>- of AA \* $\sqrt{C_1 C_2 C_3}$  was either \*-h/?/h<sup>h</sup>- or \*-g/k/γ/h- or \*-w/y-, but sometimes it is just epenthetic without a consonantal precedent (cf. Dolgopol'sky 1982, 32-36).
- Original AA pharyngeals (\*<sup>h</sup>, \*h) and laryngeals (\*?<sup>h</sup>, \*h) were mostly preserved in the Inlaut as AS \*-γ- (above). In the Anlaut, normally, AA \*?<sup>h</sup>- and \*?<sup>h</sup>- > AS zero, while AA \*h<sup>h</sup>- and \*h- > either AS \*h- or zero. In the Auslaut, they mostly disappeared, but sometimes they developed in the contrary way, i.e., AA \*h<sup>h</sup>- and \*h- may have resulted in AS \*-k#.
- Final AS \*-ŋ – beside being a natural result of an older nasal (\*m, \*n) + velar, of course – otherwise usually derives from the contraction of an AA medial nasal (\*-m- or \*-n-) + lost AA pharyngeal (\*<sup>h</sup>, \*h) or laryngeal (\*?<sup>h</sup>, \*h), cf. already Illič-Svityč 1966, 33, fn. 11.

**AS \*d = Eg. d ~ t = Brb. \*d = Sem. \*t < AA \*t̪**

**238. AS (or just Suroid?) \*d̪ayar** “star” [GT 2004, 82]: (?) Gerka dar-kir (compound) [d- < \*d̪- or \*z-?] “star” [Ftp. 1911, 220], Kfy. dàgar [reg. < \*d̪ayar] “star” [Ntg. 1967, 8], Msr. ḫakar [-k- reg. < \*-γ-] “star”, ḫakar poo-bit “early morning star” (poo-bit “early morning”), ḫakar pya pee “the star shines the place” (pya “to shine”, pee “place”) [Dkl. 1997 MS] ||| Eg. \*dw3 „(phonetic value of the hrgl. depicting a) „star (and a star in circle)” (Grd. 1927, 475, N14 and 476, N15, resp.) ||| Sem.: cf. perhaps Ar. √ṭrr I „13. briller, se montrer (se dit, p.ex., des étoiles)” [BK II 64] < AA \* $\sqrt{t(w)r}$  „star” [GT]. Gerka dar- may alternatively be equated with NOm.: Sheko 'dértn „star” [Bnd. 2003, 217, #127].

**239. AS \*dak** (var. \*dak?) → \*dək “to care for” [GT 2004, 82]: Angas dək (so, d-) “ein Baby versorgen” [Jng. 1962 MS], Gmy. ḫak “1. to attend upon a sick person or a sick beast, 2. look well after oneself” [Srl. 1937, 24] = dak “to heal” vs. dak [dak ~ dak] “to feed (e.g. chicken)” [Hlw. 2000 MS, 4, 6] ||| ES \* $\sqrt{tnqq}$  (epenthetic nasal?) „to be careful” [Leslau 1987, 594].

**240. AS \*dak (< \*dʷak?)** “true, truly (?)” [GT 2004, 82]: probably Angas o-dak (≈ o-gak) “okay” (≈ Hausa too “very well!”, Abr. 1962, 868) [ALC 1978, 50], Sura ḫak “2. tatsächlich, wirklich” (≈ Hausa dáí “indeed”, Abr. 1962, 170) [Jng. 1963, 63], perhaps Kfy. ší-dùk [< \*dʷak?] “truth” (cf. AS \*šik- “matter”?) [Ntg. 1967, 36] ||| ES: Geez ṭanqaqa „to be exact, strict, accurate, equal, fit exactly,

do sg. accurately, with precision or with attention, measure exactly, be accomplished” [Leslau 1987, 594]. Cf. the next entry.

**241. Gmy. ḋak** (adv.) “very (generally used with ḥal ‘hard’ only)” [Srl. 1937, 90], vars. in Gmy. toe-tak “entirely” [Srl. 1937, 252] vs. Gmy. tak-talak “very” [Srl. 1937, 236] ||| ES: Geez ተቃቀል „exactly, precisely, accurately, certainly, surely, completely, greatly, exceedingly, extremely, very (much), even, indeed, more, how much (more)!“ [Leslau 1987, 596] = „exactement, complètement, beaucoup“ [DRS 1109], usually explained from Geez ተንቀቀል „to be exact etc.“ [Leslau]. Related to the preceding entry.

**242. Angas ḍák** “steckenbleiben” [Jng. 1962 MS] ||| Sem.: MSA \*√tyk: Mehri ተያሳቅ and Jibbali ተያሳቅ „être collé, attaché“, eṭeyək „marcher dans la boue“ [DRS 1099: isolated in Sem.]. Alternatively, cf. the section for AS \*d secondary < AA \*H + \*d or \*d + AA emphatics (below).

**243. Gmy. \*ḍam** “to dive” [GT 2004, 83]: Gmy. ḍam’ [ḍám] “to dive”, cf. also ḍam ḁa “to pass over one’s head, be deep” [Srl. 1937, 26, 46] = ḍam “to dive, sink” [Hlw. 2000 MS, 6] ||| LECu.: Afar ደົມ “submerger (to sink)” [PH 1985, 94] ||| Sem. biconsonantal \*√tm „to sink (?)“ [GT] > Ar. ተምጣማ „nager, voguer au milieu des flots“ vs. ES \*√tm: Geez ተም’a „1. immerger, tremper, 2. teindre“, Tigrinya täm’e „plonger, tremper“ (Sem.: DRS 1085, 1087).

**244. AS \*ḍaŋ** “1. to wish (?), 2. beg” [GT 2004, 84]: Angas ḍaŋ “bitte, doch” [Jng. 1962 MS] = ḍaŋ “please” [ALC 1978, 12], Sura ḍaŋ “bitten, erbitten” [Jng. 1963, 63], Mpn. ḍaaŋ (so) ~ ḍaŋ “to beg” [Frj. 1991, 14], Kfy. ḍàng “to beg” [Ntg. 1967, 9, 42], Msr. ḍaŋ “to beg” [Jng. 1999 MS, 4], Gmy. ḍang “to prefer, like” (so) [Srl. 1937, 28] | Ron-Fyer ḍaŋ „bitten um, erbeten, betteln“ [Jng. 1970, 84] ||| HECu. \*ṭam?- „to ask“, \*ṭam?- „question“ [Hudson 1989, 22, 422] ||| Sem. \*√tm [GT] > Ar. √tm > I ተማ አ “désirer ardemment, être avide de qqch., désirer obtenir”, ተማ አ „être avide, être rempli d’avidité“, cf. also ተማහ አ „4. chercher qqn. ou qqch. partout et avec persistance“ [BK II 108 vs. 104, resp.] || Jibbali √tm > ተዶ “to desire, be greedy for”, ተም “desire, greed” [Jns. 1981, 278] || Tigre täm’ā „(re)garder avec convoitise“, Tigrinya tämmäe „être pingre, avaricieux“ (ES: DRS 1087) < AA \*√tm „1. to wish, 2. ask (for)“ [GT]. Cf. also AS \*dem ~ \*ḍom vs. \*ḍwam “1. to desire (for flesh), lust, 2. be greedy, 3. want, love, agree” [GT 2004, 88] < AA \*√tm (below), the biliteral simplex of the present root. Another PAA root variety is represented by AA \*√dm „1. to want, 2. look for“ [GT] discussed s.v. AS \*dem > \*deŋ “to prefer, favour” [GT 2004, 68] (above).

**245. AS \*ḍaŋ** “lizard sp.” [GT 2004, 84]: Angas dang “lizard” [Ormsby 1914, 313], Mpn. ḍaŋ “monitor lizard” [Frj. 1991, 14], Gmy. ḍang “the iguana, kind of

large sized lizard living near waters (two feet long)” [Srl. 1937, 28] = ḏan “monitor lizard” [Hlw. 2000 MS, 6] ||| (?) Bed. ḏan ~ ḏə?an [< metathesis \*√t?m of \*√tm??] „gecko, house lizard” [Roper 1928, 177] ||| Eg. \*dmj [regular < \*√tm?], phonetic value of the „späte Hieroglyphe” depicting „ein eidechsenartiges Tier” (Zyhlarz 1934-5, 171) = „(Hieroglyphe ‘Eidechse’ mit der Lesung dmj e.g. in Philae I 102:13, II 87:1, Edfou VIII 75:1)” (Brunner-Traut, LÄ I 1205, n. 1, cf. LÄ VII 500) ||| possible Semitic reflexes < \*√tm (with semantic shifts)<sup>4</sup> corroborating AA \*√tm? „lizard” [GT]. An ultimately related PAA root variety with plain \*d- must have also existed, cf. the following SAA varieties with diverse extensions:

(245.1) **SAA \***√dm [GT] > LECu.: PSam \*dīm „tortoise” [Heine 1978, 56] ||| WCh. \*dam- „lizard” [GT]: Hausa dámoo „1. an iguana lizard” [Bargery 1934, 207] = damo „Kammechse” [Vycichl 1938, 135] = „1. land-monitor” [Abraham 1962, 182] | Sura \*dam- in dàm-sàr (coumpound)<sup>5</sup> “Gecko” [Jng. 1963, 63] || CCh.: Mwulyen dàmwàzà „lizard” [Kraft 1981 III, 58, #171]. Already W. Vycichl (l.c.) surmised that the hieroglyph depicting a lizard-shaped animal with 4 legs (GT based on Wb V 453) with the phon. value dm „in den späten Schreibungen für dmj ‘Stadt’ könnte aber alt sein und mit Hausa damo ‘Kammechse’ zusammenhängen”. As an areal parallel cf. Nubian: Mahasi dimō „Chamäleon”, which already E. Zyhlarz (l.c.) combined with Eg. \*dmj.

(245.2) **SAA \***√dm̪ [GT] > Bed. damba „lizard” [Roper 1928, 171] ||| ECh. \*dimbil- „lizard sp.” [GT]: Bidiya dimbil (m) „gros lézard” [AJ 1989, 68] | Ubi dimbil „ver de terre” [Alio 2004, 269, #84].

(245.3) **SAA/Ch.** (also in AA?) \*√dng [GT] > WCh.: perhaps Gmy. diang (so, dia-) in: nem-mat-diang “frog” (cf. AS \*lam-wat “frog”) [Ftp. 1911, 217] || CCh.: Musgu díñidinjíí, pl. déñdeŋ ~ diñedinkái „Eidechse” [Krause apud Lukas 1941, 51] = diñidiñíí „lizard” [Kraft 1981 apud Mkr.] || ECh. \*tiyan̪- (unexpected \*t-) „chameleon” [GT]: WDangla týàngò (tíyàngò?) (m), pl. tiyangina „caméléon” (ar. irbe) [Fédry 1971, 163] | Kofa tiyàŋ (m) „chameleon” [Jng. 1977 MS, 13,

<sup>4</sup> One wonders if Ar. ṭamma „6. courir rapidement, 7. être rapide, vêloce”, √ṭmy I: ṭamā „passer avec rapidité” vs. ṭimm- „1. grand nombre, masse, foule” vs. ṭimm- „5. pénis d'une grandeur démesurée” [BK II 105, 110] preserve the traces of a lost word for „lizard” < AA \*√tm „lizard” [GT]. Noteworthily, the very same semantic (resembling the typical attributes of lizards) spectrum appears in the case of Eg. ፩3 „lizard” (MK/CT, FD 49; DCT 79) = „gecko” (Zyhlarz 1934-5, 171) = „Gecko (Hemidactylus spec.) Scheibenfinger” (ÄWb II 570) vs. ፩3 „viel sein” (OK-, Wb I 228, 8-26) ||| Sem.: Ar. ፩šir-at- „4. plume de la queue d'un oiseau” vs. Ar. maጀšar- „1. réunion, assemblée d'hommes, de personnes ou de démons” vs. ፩ašrab- „3. qui court avec rapidité, bon marcheur” [BK II 261-262]. E. Zyhlarz (l.c.) connected Eg. ፩3 with Nubian: Mahasi aža(r), Kunuzi, Dongola aši „Gecko”.

<sup>5</sup> For its second component cf. AA \*√Sr „lizard” [GT] > Eg. ፩3 (root extension ፩-?) „lizard” (MK/CT, FD 49; DCT 79) ||| NOM. \*zar- „lizard” [Bender 1988, 151] ||| WCh.: Hausa zárái „the lizard zarya” [Brg. 1934, 1132], cf. also Hausa záryáá „a smooth-skinned skink with red sides, similar to kul'ba but much longer” [Brg. 1934, 1135] = „the skink šààríndò (= mázárií)” [Abr. 1962, 970] ||| CCh.: (?) Mofu màklàzàràw (compound?) „lizard” [Rossing 1978, 285, #433.b].

#302] ||| (???) Eg. dngngs „Bez. der Uraeusschlange (an der Stirn des Königs)” (GR, Wb V 470, 8) = „l’uræus” (Cauville 1997, 639).<sup>6</sup>

(245.4) An ultimately related quadrilateral extended AA root variety is represented by SAA \*√dngr [GT] > POm. \*dingar „snake” [Blažek 1989, 212 pace Cerulli 1951, 431] = \*dingar „lizard” [OS] ||| WCh.: Hausa kà-dángárè (m), pl. kà-dàngàrúú „lizard” [Abr. 1962, 442]<sup>7</sup> | Karekare dònkarà, Ngamo dèkùrà „lizard” (BT: Kraft 1981) || CCh.: PFali \*danguḍ- [-d- < \*-rd-?] „chameleon” [GT]; Fali tanerugu [metathesis < \*tanegʷur/d-?] „Chamäleon” [Strümpell 1910, 468], Fali-Mubi dǎngǔdā „Chamäleon” [Strümpell 1922-3, 135], Fali-Bwagira tangwù?un „chameleon” [Kraft], Fali-Mucella tangwù?u „chameleon” [Kraft], Fali-Jilbu tangjùwi „chameleon” [Kraft] | Gude tangwùḍ „chameleon” [Kraft] (CCh.: Kraft 1981 III, 8, 18, 28, 38, #179). For NOm.-WCh. see Mukarovský 1987, 244 and HSED #716.

(245.5) But both Skinner (l.c.; also 1995, 32) and Rössler (l.c.) affiliated it with Bed. adangaláy „Eidechse” [Rn. 1895, 8] = dangálay „lizard” [Roper 1928, 172], in which L. Reinisch (l.c.) segmented a basic stem \*adang- + suffix \*-aláy, which, if correct, would certainly discard any equation with POm. \*dingar or other reflexes of this quadrilateral SAA root, where the same analysis is not possible, and, instead, would support a direct cognacy with AA \*√dng under #3 above. By the way, after L. Reinisch (1888, 280), V. Blažek (1989, 217) combined the NOm. stem above with a certain LECu.: Oromo dāngalē „Kaulquappe” [Rn.] = „tadpole” [Blz.], which is, however, not attested in this shape in the lexicon either by G. da Thiene (1939, 91) or by G. Gragg (1982, 98). A remote cognate from WCh.: Dera gəndəl [metathesis < \*dangal?] „lizard” [Kraft 1981 II, 133, #171] = gandal [Skinner], adduced in comparison with the Bed. and Chadic terms above by N. Skinner (l.c.), might in principle point to a sporadic SAA \*√dngl „lizard”.

**246. AS \*dār “to tremble”** [GT 2004, 85] ||| Eg. d3 (reg. < \*√tr) „zittern (von den Fingern, Füssen, vom Kopf)” (Med.-, Wb V 415, 1), d3.wt „das Zittern” (CT-, Wb V 415, 2), sd3 (caus.) „zittern” (PT-, Wb IV 365-366) < AA \*√tr [GT]. Its root variety with a PAA plain voiceless \*t- is attested in Sem.: Akk. (Bab. Lit.) tarārū „zittern”, (younger Bab.) tārārū „Zittern” [AHW 1325] || Ar. tartara „1. agiter, secouer” [BK I 195] = „to move, (be) shake(n), tremble” [Ehret] ||| SCu. \*tarar- „to tremble, shake” [Ehret]: Ma’ā -tará?i „to shake” | Dahalo ṭarar- „to tremble, shake” (SCu.: Ehret 1980, 169, #8). For Ar.-SCu. see also Ehret 1995, 143, #176.

<sup>6</sup> Alternatively, see entry #201 in my „Angas-Sura Etymologies VII”.

<sup>7</sup> The Hausa form was rightly segmented by N. Skinner (1981, 175, #12), whereas O. Rössler (1983, 332, #1.09), erroneously assuming a shift of r < \*l in the Hausa word (hardly the case in the light of the above parallels), derived it from an ill-founded AA \*√qdngli (sic: \*-i!) set up on the basis of unrelated parallels. Like ES: Amhara የንግድla and NAgaw: Qwara የንሕል halo „Eidechse”.

**247. AS \*dā<sub>2</sub>r<sup>8</sup>** “(to)morrow” [GT 2004, 85-86] < Ch. \*d-(r) „tomorrow” [NM 1966, 240] = \*v̥dr [GT] || HECu. \*dar- „morning” [GT: irreg. \*d- for \*\*d-]: Had-iyya dara „morning”, cf. Kambatta sōdarārō „early morning” (\*darār- contracted with sōz- „to dawn”) [Hudson 1989, 89] || Eg. dw3.w „1. Morgenfrühe, 2. morgige Tag” (MK-, Wb V 422-423) = „1. dawn, morning, 2. tomorrow, the morrow” (FD 310). Further parallels are just as obscure as the ultimate etymology of the underlying AA word (\*v̥trr or \*v̥tw̥r or \*v̥dr̥r [GT]?).<sup>9</sup>

**248. AS \*dek ~ \*dik > \*dēk** “1. to shake, 2. sift, winnow” [GT 2004, 87] || NBrb.: Wargla t̥teg̥teg̥ „frétiller, se trémousser de contentement, de joie, sautiller” [DRB 457: isolated in Brb.] | Qabyle t̥y̥t̥ey ~ t̥y̥dey „bouillonner, crêpiter, pétiller (liquide), radoter” [DRB 478] || Sem.: (?) Syriac tāhīh (DRS: tāhīh!) „inquiet” [Brk. 1928, 272 cited in DRS 1071] | Ar. v̥tyw: I ṭayā „6. être agité, en fureur (se dit de la mer, des vagues), 7. bouillonner, être en mouvement (se dit du sang)” [BK II 86]. The C<sub>2</sub> correspondences (e.g., Wargla -g- vs. Qabyle -γ- or Syr. -h-, even if < \*-h- vs. Ar. -γ-) are sometimes irregular.

Root varieties with plain voiced or voiceless stops (\*d- or \*t-) are attested in SBrb.: Ahaggar hətəgtəg „palpiter” [Prasse 1969, 70, #416] || Eg. thth „verwirren, verworren sein, in Unordnung geraten sein, zerknittern” (MK-, Wb V 323, 8-13; GHWb 939) = „1. to make disturbance (PT 392d), 2. disorder (hair) (Urk. V 87:4, Herdsman 25), 3. crumple (papers) (CT IV 385d)”, adj. „inimical” (AEPT 251, utterance 607, n. 3, also p. 330) = „to mess up, disorder” (Allen 2000, 471) || Sem.: Ar. daydaya „6. troubler (l'esprit etc.), 7. agiter, remuer” [BK I 707].

**249. <sup>12</sup> Under this common ECu. reconstruction, D. Appleyard (l.c.) seems to have forced together words indicating at least 3 or 4 diverse ancestral roots that can semantically be distinguished from one another: (1) the LECu. forms discussed above in the main entry stem from a basic sense „to complete, close, stop” neatly agreeing with that of the Sem. comparanda, while (2) this is hardly the case with LECu.: Saho d̥ame (intr.) „to be melted, dissolved” [Vergari 2003, 74], Afar d̥am-(i) se (tr.) „to dissolve” [PH 1985, 90], whereas (3) also Somali d̥in [-n < \*-m#] „Abnahme, Abgang”, intr. verb „abgehen, mangeln, fehlen, weg sein”, tr. „verkürzen, vermindern, etw. abziehen, wegnehmen vom ganzen”, d̥im-ad „Abgang, Mangel, Entgang, Verlust”, d̥im-o „1. sich vermindern, abnehmen, 2. sterben”, d̥im-an „1. (pass. part.) vermindert u. dgl., 2. (adj.) abgängig, mangelnd, fehlend” [Rn. 1902, 138] = d̥im-ayya „to reduce, have shortcomings”, d̥im-ānayya „to die”, d̥im-ašo „to die, death”, d̥im-ād „putrefaction” [Abr. 1964, 62; Farah-Heck 1993, 176] appears to represent yet another, etymologically distinct root. (4) D. Appleyard (l.c.) included in his LECu. etymology also Konso d̥um- „to set (of the sun)” [Apl.] with right hesitation, since this form seems to clearly represent a distinct ECu. root, cf. Saho d̥ume „to set (of the sun), grow dark” [Vergari 2003, 76], Afar d̥ume „to sink (submerger)” [PH 1985, 94].

(to be constricted)”, ?*ṭāma* “rétrécir (l’orifice d’un puits), to narrow (the mouth of a vessel)” [Blachère 147] = „to stop up, close” [Zbr.] (Sem.: Zaborski 1971, #267) < AA \* $\sqrt{tm}$  „to close” [GT]. <sup>23</sup> Albeit this study is to be handled with utmost caution (like most of the works conceived in the frames of the so-called „*Neuere Komparatistik*”, a far-fetched and ill-founded hypothesis based on O. Rößler’s otherwise precious ideas, which his new fans turned into an uncontrolled chaos, which received severe critics over the past decades, for more details cf. Takács 2003). Here, e.g., the author ignored the earlier form of Eg. *dnj* and working with Eg. *dnj* (in his notation: *tnj*) forced the erroneous Rösslerian rule of Eg. *d* = Sem. \* $\$$ . The same mistake is to be found in C.T. Hodge’s (1968, 4) and the Diakonoff team’s (SISAJa II #170) comparison of Eg. *dnj* with AA parallels with \**d*.

<sup>24</sup> W.A. Ward (1962, 410, fn. 4) misquoted the Arabic reflex of Sem. \* $\sqrt{n\$}$  as *nadaha* (sic: -*d*-) „to sprinkle”.

<sup>25</sup> W. Leslau (1962, 45, fn. 5), followed by O. Rößler (1971, 289-290), W. Vycichl (1985, 172), attributed to A. Ember having misquoted the ES root \* $\sqrt{w\$}$  as \* $\sqrt{wdh}$  (which indeed never existed), which is not really true, since in ESS l.c., Ember quoted the ES root correctly as \* $\sqrt{w\$}$  with \* $\$$ - under the alleged rule of Sem. \* $\dot{d}/\$$  and \* $\$$ , whereas, misquoting the false ES \* $\sqrt{wdh}$  mentioned above was in fact committed by W. Both Ember and Rössler assumed here a direct correspondence of OEg. -d- vs. Sem. \*-ṣ-, which is not tenable in the frames of the regularities elaborated in EDE I 240-249. Nevertheless, we may admit in Eg. vs. Sem. two different, albeit remotely cognate PAA biconsonantal root varieties, viz. \* $\sqrt{th}$  vs. \* $\sqrt{ch}$ . The WCh. root (for whose comparison with Eg. cf. OS 1992, 179) may in principle be a regular reflex of either varieties. Given the Law of Belova (cf. EDE I 394-400), Eg. wd̪h may reflect AA \* $\sqrt{twh}$ , which, in turn, seems best correspond to AS (sine Gmy.) \*dō.

## AS \*d<sub>2</sub> secondary < AA \*d<sub>1</sub> + emphatics

**281. AS \*dák ~ \*dak** “calabash” [GT 2004, 83].<sup>32</sup> Kfy. dak (so, plain d-) “calabash (eating)” [Ntg. 1967, 6], Gmy. dák “a species of calabash” [Srl. 1937, 24], also Gmy. қа-dák “a very shallow calabash for eating purposes” [Srl. 1937, 90] = ka-dák “calabash” [Hlw. 2000 MS, 15] | WCh.: Tangale degó “calabash” [Jng.] | Ngizim gádákùwà “calabash (for eating)” [Schuh] || CCh.: Kotoko dúhásàà, pl. dàhwàsàn “calabash” [Lukas] || ECh.: Lele dāngá “calabash” [Caprile] | Somray dágónà “calabash” [Jng.] | Dangla-Migama \*dě́/ðk- < \*\*day/wk- (?) „calabash” [GT]: EDangla dàwgā (f), pl. dàwgīnà „la calebasse (Coloquinthe coupée au milieu et évidée, nombreux usages)“ vs. EDng. díkīyē (f), pl. díkiyāngē „la calebasse (petite taille)“ [DM 1973, 90, 94], WDangla dó̄òka (DM: dó̄òkà) „calebasse: coloquinthe coupée par le milieu et évidée, utilisée par les Dangaléat pour toutes sortes d’usages“, dō̄okō „fruit de calebassier (calebasse encore non évidée)“, cf. dòkinyè „puiser avec une calebasse“, dòkanyè „puises“ (mot formée sur /dó̄òka/) [Fdr. 1971, 210], Migama ḥyéekú (ḥye- < \*de-) (m) „grande calebasse“ [JA 1992, 82] | Kofa dèk (m), pl. dèkík „calabash“ [Jng. 1977 MS, 7, #124b], (?) Jegu dékdék „Knollenfrucht (flach)“ [Jng. 1961, 112] < PCh. \*dak- „calabash“ [GT],<sup>33</sup> which may be a remote root variety to SAA \*dah- „calabash“ [GT], discussed s.v. AS \*dā₂ “calabash” [GT] (above).

Special attention is to be devoted to the apparent special Ch.-Eg. triconsonantal isogloss \*dák-al- (extended from \*dak-?) ~> \*dalač- (metathesis?) “calabash” [GT], cf. CCh.: Dghwede \*v̚dgʷl > mádgwálà (prefix \*mV-?) “calabash” [Frick] ||| NEg. dnrg (act. \*dlg, regular < older \*\*dlq) ~ j.dnrg (prothetic j- of morphonological nature)<sup>34</sup> „eine essbare Pflanze“ (NE, Wb V 470, 4) = „Melone, Gurke, Kürbis“ (Helck, LÄ I 1269 and II 921, 922, n. 5, cf. Störk, LÄ III 269, n. 11, cf. LÄ VII 501) = „squash and/or gourds, melon“ (DLE IV 136-137) = „a sweet melon, perhaps water-melon“ (Hoch 1994, 46, #43) = „gourd“ (Ward 1996, 27)<sup>35</sup> > Dem. glg

<sup>32</sup> Synchronously, the AS stem would easily look like a mere extension of AS \*dā₂ “1. calabash, 2. dish” [GT 2004, 81] (discussed above, q.v.). But the AA parallels discussed here suggests that behind the AS varieties, two diverse SAA root varieties for “calabash” may underlie, viz. \*dah- vs. \*dak- [GT].

<sup>33</sup> Whether ECh.: Ndam žók [Jng.], Tumak žooǵ [Caprile] | Birgit žùgùnýé [Jng.] – all “calabash” (ECh.: CLR II 57) display a secondary shift of ž- < \*ḥy- from this root above or represent a distinct one with an original voiced affricate, remains subject to further research, cf. SAA \*žung-(Vr)- „sp. of gourd“ [GT 2001, 65] > SCu.: Ma'a i-zunge [-Ø < \*-r# regular] „cucumber“ [Ehret 1974 MS, 75] ||| WCh.: Hausa zùngjúrúú „long gourd (worn on arm by women to protect newly-hennaed hands)“ [Abr. 1962, 980] | Bole-Tangale \*sVng- [irregular \*s-?] „melon“ [GT]: Ngamo šenži, Pero čonži, Tangale yəngu [y- < \*s-] (WCh.: Kraft 1981, #227).

<sup>34</sup> J. Hoch (l.c.) collected the following orthographical vars. from Dyn. XIX-XXI: jdng (6x) jdng (2x), jdnrdrg (1x), jdnrdng (1x), jdnrq (2x), jnrqd (1x), dg (1x), dgj (1x).

<sup>35</sup> The NEg. term had earlier been rendered „carob“ (Loret, RT 15, 1893, 119f.; Caminos, LEM 74, 76; DLE l.c.) = „Johannisbrot(frucht)“ (Helck, LÄ II 922, n. 5 and Störk, LÄ III 269, n. 11, both pace Loret). But the meaning „melon“ has become commonly accepted.

(via assimilation < \*dlg)<sup>36</sup> „gourd” (not in DG, CED l.c.: pap. Cairo 30982, vo. 11) > Cpt. (S) σλοσ, (L) εσλασ, (B) σλο/ωσ, σλοτ, εσλοχ, εχλοχ, ωλωσ (m) „gourd” (CD 815a; CED 330) = „Kürbis” (KHW 455). NEg. \*dlg has had so far a phonologically ambiguous etymology, a presumed borrowing from Sem. \*√dl<sup>o</sup>.<sup>37</sup> Since our word does not occur in script before LEg., it may well indeed be a loan, but not necessarily *eo ipso*. In the light of the Chadic parallels, however, and especially in that of Dghwede, one is disposed to side better with J.J. Jansen (Ex Oriente Lux 19/6, 1967, 445) in assuming in NEg. \*dlg not a Semitic loan, but a „well known” (i.e., a native) Egyptian word for „gourd”. What if NEg. \*dlg „gourd” (or sim.) evolved from an AA \*√dk „calabash” [GT] on the analogy of at least two similar instances of an epenthetic Eg. \*-l- as C<sub>2</sub>, i.e., another means of triconsonantization?<sup>38</sup> May we perhaps recognize, by the way, the same root extended by \*-l- (i.e.,

<sup>36</sup> J. Černý (CED 330) projected this assimilation to Coptic assuming an unattested primary \*τλοσ < \*dlg referring to a parallelism with the case of (S) σλοοσε vs./< τλοοσε, but this is unprecise, since here, both Coptic forms are attested, whereas the change in the word for „melon”, in fact, had been completed by Demotic glg < \*dlg. The same pertains to W. Westendorf's (KHW 455) argument of Cpt. (S) σλοοσε vs./< δλοοτε „Niere”.

<sup>37</sup> J. Hoch (1994, 46-48, #43) explained it from Mishnaic and modern Hebrew də/la<sup>c</sup>at „cucumber, pumpkin” [Hoch, Ward] | Maghrebi Ar. dallā<sup>c</sup> „water-melon” [Hoch] = dallā<sup>c</sup>a ~ dullā<sup>c</sup>a „pastèque, melon d'eau (sandia)” [Dozy I 457; DRS 267: isolated in Sem.], Moroccan Ar. dəllāh ~ dellā/ā<sup>c</sup> „pastèque” [Premare 1994 IV 318], although he too found the reflection of Sem. \*<sup>c</sup> (not \*γ) as LEg. -g as „unexpected”, which compelled him to postulating that LEg. \*dlg originated in an unattested Semitic root \*√dly, which „passed into Arabic via a language, such as Syriac, that no longer distinguished”, which, in his view is „slightly supported by the fact that Ar. dallā<sup>c</sup> refers to melons called Indian, Palestinian, and Syrian” (cf. Dozy I 457b). In this respect I regard the reflection of NBrb.: Wargla ta-dluh-t, pl. ti-dluy-in „sorte de coquillage” [Dlh.] as Ar. dulla<sup>c</sup> (DRB 332) to be noteworthy. Even more far-fetched is his alternative hypothesis on the anomaly of \*<sup>c</sup> vs. \*γ here: „the Egyptian perception of « as γ could have had a simple phonetic basis: assimilation of voicing from /d/ and /l/”, although both phonemes were voiced, there difference being due to their place of articulation. Hoch's third theory is not better either: „or misperception on the part of the Egyptians?”. Nonetheless, since W.A. Ward (1996, 27) found the word nowhere else in Semitic than Mishnaic Hebrew and Maghrebi Arabic, he excluded a connection of the Sem. and Eg. plant names. Now, AA \*√dlk „calabash” [GT] appears to offer a phonologically much safer option for Eg. dnrg.

<sup>38</sup> Cf. (1) Eg. dnrg (\*dlg) „to be deaf” (NE, DLE IV 136) < AA \*√dg ~ \*√dk „1. deaf, 2. stupid” [GT], examined s.v. AS \*duyur ~ \*d<sup>w</sup>ayar (?) → \*duyar “4. to be deaf” [GT 2004, 76] in „An-gas-Sura Etymologies VII”. Or cf. Ward 1962, 405, fn. 6; KHW 369; Castellino 1984, 16. Curiously, W.A. Ward (1972, 20) negated later „*Yeivin’s tempting etymology*” having found it as a theory disproven by the LEg. evidence for its C<sub>2</sub> as  $*-l-$ , whose secondary epenthetic nature (as a root extension) only now can we understand. All this overwrites the comparison of Sem.  $*\sqrt{hlw}$  „sweet” with Eg.  $*\sqrt{hlq}$  (cf. Vycichl 1990, 50), whose old meaning, as we have just seen, was substantially different.
